

HYDROGEN 5.5

PROPERTIES

PHYSICAL & CHEMICAL

**OPEN
24/7**

Molar mass: 2.016 g/mol
 Melting point: -259°C
 Boiling point: -252.8°C
 Density of the gas phase (1.013 bar and 15°C): 0.0852 kg/ma
 Density of the liquid phase (1.013 bar at boiling point): 0.07076 kg/l
 Gas density (1.013 bar at boiling point): 1.312 kg/ma
 Latent heat of fusion (1.013 bar at triple point): 58.158 kJ/kg
 Latent heat of vaporization (at 1.013 bar boiling point): 454.3 kJ/kg
 Critical temperature: -240°C
 Critical pressure: 12.98 bar
 Compressibility factor (Z) (1.013 bar and 15°C): 1.001
 Concentration in the air: 0.00005% vol.

APPLICATIONS :

Used for air quality monitoring, Analytical chemistry, Calibration gas mixtures, Chemical synthesis, Electronics and semiconductor, Emissions monitoring, Environmental monitoring, Flame ionization, Flame photometry, Fuel cells, Gas chromatography Petrochemicals and refining, PH Control , Pharmaceutical uses , Energy production and transmission, Calibration of control instruments.

TECHNICAL INFORMATION

Purity :	Impurities :				
H2	N2	H2O	O2	CO+CO2	CnHm
≥ 99.9995 %	≤ 3 ppm	≤ 2 ppm	≤ 1 ppm	≤ 0.2 ppm	≤ 0.1 ppm

Conditioning :

Bottle
B50
